Agenda

- Narrowing scope to wasi:webgpu
- Moving wasi:webgpu to P3
- Recent activity

Narrowing scope to wasi:webgpu

- Going forward, `wasi:webgpu` is the only wasi-gfx interface progressing inside wasi.
- Everything else moves to a separate namespace, free to iterate at its own pace.
- Why: after discussions with multiple subgroup members, we concluded that `wasi:surface` isn't ready for wasi's long-term stability bar.
- More about the new wasi-gfx namespace: wasi-gfx.dev/blog/posts/future-of-wasi-gfx

Questions?

Moving wasi:webgpu to P3

WebGPU on the web is async — to match it faithfully, wasi:webgpu needs P3.

Progress:

- ☒ Update spec to P3
- ☒ Update Wasmtime bindings to P3
- ☐ Browser shim through github.com/wasi-gfx/wasi-gfx-shim
 - C bindings through webgpu.h
- ☐ Rust bindings through WGPU
 - JavaScript bindings through github.com/wasi-gfx/wasi-gfx-js

Recent Activity

- Moving to OCI and wkg
- WebGPU spec tests on top of wasi:webgpu
- Adding wasi and wasi:webgpu support to llama.cpp
